ASSOCIATE PROGRAM ENGINEER | PRODUCTION & OPERATIONS

From performance to decision

Integrated engineering + operational planning + commercial evaluation

THE PROBLEM

Production trends alone are insufficient for work-program decisions.
Engineering, budget, procurement, execution risk, and reporting must connect.

SIX INTERCONNECTED MODULES

01 EXECUTIVE OVERVIEW
Observed signals and decision context

02 PRODUCTION ANALYTICS
43 real monthly source observations

03 WORK PROGRAM & BUDGET
Editable hypothetical screening cases

04 TENDER EVALUATION
Eligibility before weighted comparison

05 CONTRACT TRACKER
Weighted illustrative deliverable progress

06 RISK & REPORTING
5x5 matrix and briefing exports

ENGINEERING DECISION PATHWAY

OBSERVE > SCREEN > BUDGET > EVALUATE > EXECUTE > REPORT

Data integrity first: observed field volumes are REAL; work packages, costs, vendors, contract milestones, risks, and intervention uplifts are ILLUSTRATIVE.

EVIDENCE / METHODOLOGY / INTERVIEW

Demonstrable engineering judgment

Field: 16/1-12 Troldhaugen | NPDID 17196400 | Latest: July 2026

GROSS OIL	PRODUCED WATER	DATA COVERAGE
4.64 kSm3	11.17 kSm3	43 months
Jul 2026, observed	Jul 2026, observed	Jan 2023 - Jul 2026

OBSERVED GROSS OIL PRODUCTION

BUSINESS SCENARIOS — STRICTLY ILLUSTRATIVE

Work program: assumed costs, durations, uplift and success probabilities.

Tender: fictional vendors, HSE/qualification gates and demonstrative scoring.

Contract/risk: proposed milestones, owners, likelihood and impact ratings.

INTERVIEW MESSAGE

"I connect evidence-based petroleum engineering with the operational processes needed to develop work programs, evaluate risks, and support management decisions."
