01 / CV CLAIMS VS REPRODUCIBLE EXAMPLES

Rokan screening -> intervention concept

SCOPE: WHAT THE SUBMITTED CV STATES

SCREENED	PRIORITY	POTENTIAL	DEMO SAMPLE
101 wells	21 wells	~13 MMBO	8 fictional
Candidate CV statement	Candidate CV statement	CV reserve potential	Not a subset of 101

EVIDENCE BOUNDARY

Original well-by-well records, reserves classes and supporting volumetrics were not supplied.
The case below demonstrates a method; it does NOT reproduce actual Rokan outcomes.

ILLUSTRATIVE WELL REACTIVATION SCREENING

CANDIDATE	WATER CUT	POTENTIAL	SCORE	SCREENING
DEMO-W01	30%	150 bopd	93.0/100	PRIORITY
DEMO-W02	57%	95 bopd	78.0/100	PRIORITY
DEMO-W03	88%	18 bopd	47.0/100	HOLD / REVIEW
DEMO-W04	23%	185 bopd	72.0/100	HOLD / REVIEW
DEMO-W05	42%	115 bopd	85.0/100	PRIORITY
DEMO-W06	73%	45 bopd	59.0/100	HOLD / REVIEW
DEMO-W07	35%	125 bopd	79.0/100	PRIORITY
DEMO-W08	65%	65 bopd	44.0/100	HOLD / REVIEW

SCREENING LOGIC / EXAMPLE ONLY

Weighted score = 20% data quality + 25% integrity + 25% feasibility
+ 20% potential rating + 10% water tolerance, all rated 1 to 5.

Priority gate: score >= 70/100, integrity >= 3, feasibility >= 3.

Actual decisions require well history QC, integrity, feasibility and economics.

INFORMATION CLASSIFICATION / CV claim != verified field outcome != hypothetical example.

02 / ILLUSTRATIVE WORK PACKAGE / NO OPERATOR APPROVAL

Program cost, procurement and technical assurance

DRAFT AFE WORK PACKAGE / FICTIONAL IDR MILLIONS

DRAFT COST ELEMENT	QTY X UNIT RATE	IDR M
Well history verification & program design	1 x 85	85.0
Site access and HSE readiness	1 x 220	220.0
Rigless unit, crew & equipment	4 x 120	480.0
Well logging / diagnostic services	2 x 130	260.0
Completion consumables & spare parts	1 x 140	140.0
Backup pressure-control equipment package	1 x 200	200.0
Final QC reporting and close-out	1 x 60	60.0

DIRECT
IDR 1,445 M
All cost lines invented

CONTINGENCY 12%
IDR 173.4 M
Simple draft allowance

TOTAL ESTIMATE
IDR 1,618.4 M
Unapproved, illustrative

DRAFT SOW / TOR - WHAT WOULD BE DOCUMENTED

Scope: well history review, readiness check, permitted diagnostic acquisition and QC.
Requirements: calibrated equipment, competent crew, method statement, HSE plan.
Acceptance: daily reports, QC logs, interpretation summary and closeout.
Excluded: production uplift guarantees, approval, access rights and well integrity assurance.

TECHNICAL BID EVALUATION / FICTIONAL THREE-BID EXAMPLE

VENDOR	TECH	HSE	ELIGIBILITY
Vendor Alpha (illustrative)	88.55	PASS	DEMO ELIGIBLE
Vendor Beta (illustrative)	77.35	PASS	DEMO ELIGIBLE
Vendor Gamma (illustrative)	89.55	FAIL	NOT ELIGIBLE

TBE criteria: execution method 35%, resources 30%, quality 20%, mobilization 15%.
HSE and qualification are mandatory gates; high technical score alone does not override failure.

No source wells, actual AFE, authorized tender, award, vendor proposal or PTK-007 conformity are represented. Reference documents and algorithms are in the website ZIP.
